

# Public and Private Event

## Overview

Welcome to the world of events management. webMOBI has come up with Branded mobile Apps with a comprehensive solution for managing events. We offer a complete all-in-one event management solution, which makes it easy to get the most out of your events. Showcase your Brand, build communities, increase audience engagement, and drive excellent ROI.

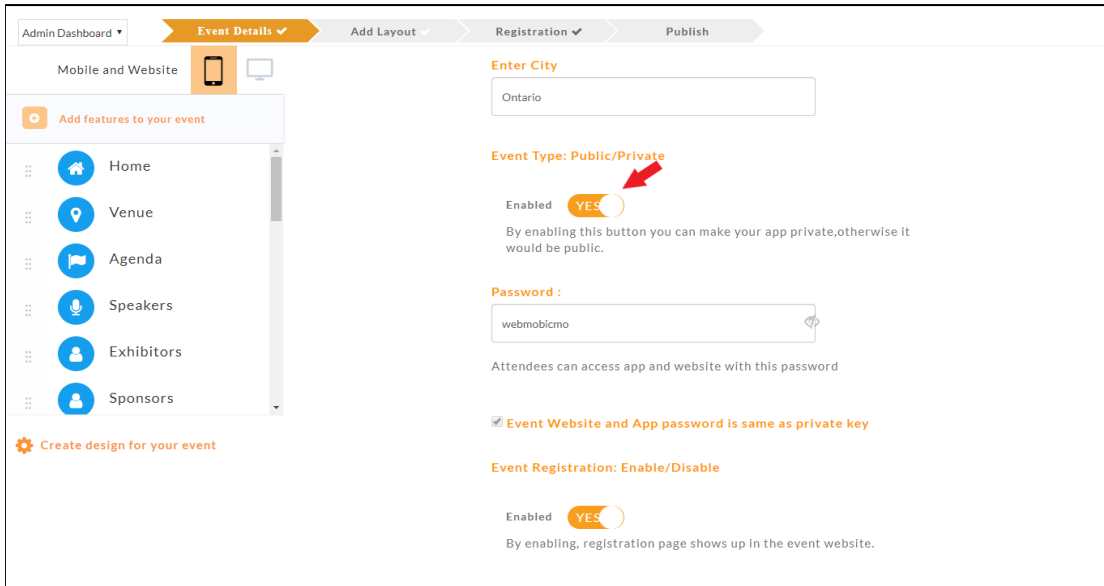

## Event type:

### Public Event:

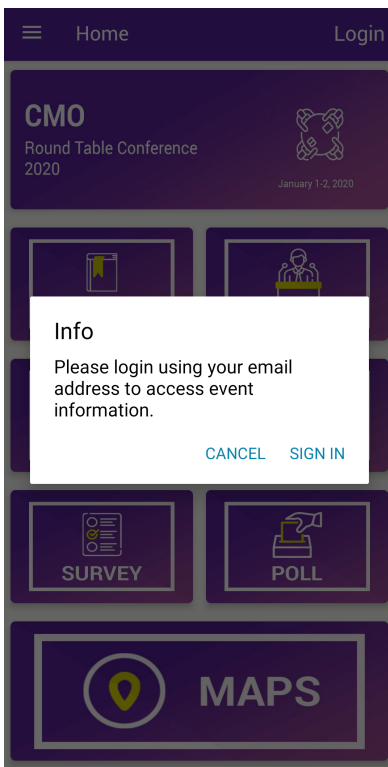

1. User can download the application from the App Store or Play Store
2. Users can register using the Sign Up option or connect with Facebook and LinkedIn options.
3. Even Though the user is not registered or logged in he can access the application but he will not be able to see the attendee list and Add On features.
4. Organizers can add the attendees and send the email regarding registration by selecting the send email option given to the organizers while adding attendees.
5. Users will receive the password to their registered email address using which they can log in to the application else user can register using Sign Up option as mentioned above

### Private Event:

If the event is private, only registered users can see the event app. The admin or event manager will set the password for the event as shown below.

In the settings page under add layout admin can set the password or private key.

To view private events users must be logged in with the registered email and private key as a password which is shared by the admin.
